## Overview

Healthcare Effectiveness Data and Information Set® (HEDIS®), is a set of more than 90 standardized performance measures used to annually evaluate and compare the performance of health plans. Data for these measures are collected using administrative/claims information and Member medical record information. HEDIS® results are used to identify opportunities for improving healthcare.

The National Committee for Quality Assurance (NCQA) allows additional exclusions to HEDIS®, measures for patients with advanced illness, and limited life expectancy as services measured by NCQA may not benefit older adults with limited life expectancy and advanced illness. NCQA wants providers to focus on appropriate care for their patients, and unnecessary tests or treatments could burden these patients or even be harmful. The use of HEDIS-approved billing codes can substantially reduce medical record requests for HEDIS data collection purposes.

## Summary of sections
